WHY CHOOSE REGENERATIVE THERAPY?

REDUCE THE NECESSITY FOR MAJOR SURGERY

Greatly reduce the need for surgery by treating injured tissues before the damage progresses any further. Imagine alleviating your knee pain without having to get a knee replacement. Regenerative therapy is meant to have lasting results. This means that the goal is to heal injured tissue instead of just masking the pain.

QUICKER HEALING PROCESS

Regenerative therapy has helped many professionals and athletes heal rapidly from an injury and get back to full activity. Regenerative medical procedures are ideal for individuals who face ailments such as back pain, knee arthritis, tendonitis, ACL injuries, hip or shoulder rotator cuff tears, tennis elbow, hip bursitis, patellar tendon injury, plantar fasciitis, and achilles tendon injuries.

WHAT IS PRP THERAPY?

Platelet rich plasma (PRP) therapy has been clinically proven to treat pain in the body. This safe procedure includes simply injecting your own platelets into areas affected by pain. Because stem cells are interchangeable, they are able to transform into many different cells, replace dead cells, and restore tissue.

COST

The cost of regenerative therapy procedure depends on your treatment. Keep in mind that after your first procedure, subsequent injections are likely to have a reduced cost. For more information, call 586-563-3300 to receive pricing information for your customized regenerative therapy treatment.

RECOVERY TIME

Recovery times vary between patients, but you can expect to see improvement in your pain and mobility about four to six weeks after your treatment. You will continue to see improvement for up to six months. Regenerative therapy patients usually experience a rapid recovery and are back to their regular daily activities within a week or two.

BENEFITS

There are multiple benefits to the regenerative therapy process. The procedure itself takes less than an hour to perform without undergoing surgery, anesthesia, or hospital stays. Most patients return to work the following day after their procedure. Undergoing a regenerative therapy procedure is safe and effective.
